Moving to Sitecrafter

Getting Started · https://sitecrafter.uk/docs/moving-to-sitecrafter/

If you need help with an existing site or just a reliable partner to keep your website running smoothly this service is for you. Sitecrafter only works with sites that we manage. In order to manage a site we haven't built, we go through a transfer process.

How the transfer process works

Step 1: WordPress audit

Our first step is an audit of your current website and WordPress setup. After the audit is complete we'll highlight any issues. We'll also advise on any third party plugins that you need to have licenses for.

Step 2: Standardisation

After the audit we'll correct any issues and changes that are necessary to align the website with Sitecrafter security and performance standards.

Step 3: Website Migration

Once the necessary changes have been complete on your website, we'll transfer the site to our servers and connect it with our WordPress maintenance platform.

Step 4: Transfer complete

Finally, we'll send you a preview link to view the site on our server, once you are happy that everything is present and correct we switch over to the new server and the transfer is complete.
