Requesting Changes

Getting Started · https://sitecrafter.uk/docs/requesting-changes/

From time to time you might want to make a change to your website - whether that's a design tweak, a new feature, or a more significant upgrade.

The process is straightforward:

1. **Get in touch** - drop us a message with an outline of what you'd like to change or add. No need to have everything figured out at this stage - we can work through the details together.
2. **We'll review and come back to you** - we'll look at what's involved and put together a short change request summary. This will cover any impact on your site, an estimated cost, and a rough timescale.
3. **Give the go-ahead** - once you're happy with the summary, just send over your approval and we'll get it scheduled in.

If you're ever unsure whether something counts as a small tweak or a larger piece of work, just ask - we're always happy to have a quick chat before anything is formalised.
